

Why Haven't Happy Denture Wearers Been Told These Facts?

Was Your Set Purchased Before 2003?

Do you still believe your next set of dentures can't possibly feel as good as the ones you're wearing now?

Then here is the full uncensored story of how you can *look younger* and avoid bacterial infection that can end up in your mouth, and still be assured your pearly white teeth will be just as *comfortable* as they are now.

How many times have you thought about what would happen if your dentures cracked or broke and you didn't have a spare set?

How many times have you looked in the mirror and wished you had whiter teeth?

How many times have you had to fumble around looking for your dentures?

Finally Because Of A New Process, You Don't Have To Worry Any Longer.

Up until now, if you needed a new pair of dentures, there was no good way to "copy" the comfortable feel a patient was used to wearing. And this is why most happy denture wearers put off getting a new pair. But here is the real predicament! **The American Dental Association recommends** you replace your dentures every 5-7 years, because the older the denture the more likely it is to be infected with bacteria and fungi and smell bad.

Who wants that roaming around in your mouth?

Not only that, if your dentures broke or cracked you'd have to wait 3 weeks until a new set could be made. And no one wants to have to walk around without their teeth for 3 whole weeks! *Do you?*

Completely New Method Solves This Embarrassing Problem

To solve this embarrassing problem, a dental lab specializing in dentures developed a completely new method of creating dentures.

They discovered in case after case that this simple method reduced the wait time from 3 weeks to 1 week and office visits from 6 visits to 2 short visits.

Sound Impossible? Not at all. There's actually another benefit. You won't have to be poked and

prodded anymore with gooey impressions and fittings.

But the speed and comfort are only 2 of the benefits you'll receive should you ever need a new pair.

This additional mystery benefit and much more is revealed in a **Special Dental Report for Happy Denture Wearers** which I've prepared FREE just for you. It's titled, *How to have comfortable, whiter looking teeth that smell great in just 1 week, guaranteed.*

In this Special Dental Report you'll find out:

- **How to tell if the dentures you're wearing are indeed infected already.**
- **If you've actually become desensitized to your own mouth odors**
- **How to reduce yeast, bacteria, fungus and other nasty things living on your dentures**
- **The new little known technique to create a copy of your present denture, make them fit as snug as a glove and look whiter in just 7 days.**
- **How to insure you'll never be without another pair of dentures for more than 24 hours for the rest of your life.... guaranteed.**

Here's what D. Lankshear, a happy patient said after reading this **Free** Dental Report:

Now I finally have the security of knowing that I will never have to go without smiling. Thank you Dr. Dolson.

If you want to know how you can feel comfortable smiling every day for the rest of your life, send for your FREE copy of this Special Dental Report. There is no obligation. Just a recorded message.
